

## INDUSTRY LEADING IT SERVICE

PROVIDING IT SUPPORT AND SERVICES FOR LABORATORIES

**Gestalt is committed to providing industry leading IT integration and support services to hospitals, commercial and independent laboratories**

### Connectivity

Our staff are experts in standard and proprietary connectivity solutions. We provide integration and interfacing services to labs, supporting or supplementing their existing IT departments. Many IT departments are staffed with full time experts who are busy supporting their existing interfaces, applications and IT infrastructure - this makes them stretched thin to be able to take on new or emergent projects. That's where our staff comes in. We are able to tackle new or timely projects or to take over the daily support requirements so that your existing staff can take on the new initiatives.

### Project Management

Gestalt's employees are passionate about delivering projects on time and that exceed expectations in the quality of the outcome. We can manage existing projects, new initiatives, application upgrades or new implementations.

### Legacy LIS & Application Support

Our employees are not only smart and experts in their respective fields, they are also dedicated to increasing the efficiency of your existing staff and applications. We are able to support your legacy applications at the operating level as well as at the workflow level. In many cases, we can offer add-on and enhanced features or modules to truly leverage the flexibility and add value to your legacy solutions for a faster, less expensive, and more personal support experience.

### IT Staff Augmentation

Our experienced, dedicated staff can provide much needed support and bandwidth to your IT department. We act as an extension of your team by providing short and long term resources that are either project based or time based. We can fill a key role temporarily while you are looking to fill it with a permanent hire or extend your staff to complete a timely project, keeping your projects and daily responsibilities on track and on budget.

### Workflow Optimization Consulting

Whether you are using our solutions, or those of another vendor, we can ensure that you are optimizing your use of your applications and your human resources. Our employees have decades of combined experience in laboratory applications, services and support. We are able to assess your current workflow, along with the use of your applications, and provide you with actionable steps to increase your efficiency.

### What our Customers Say About Us

"Gestalt is the glue that binds our laboratory IT systems together and makes everything work. Their support is second to none and they keep us and our customers happy. Most of all, their innovative technical methods helps us to use what we have, save us money, and grow our laboratory business."

**Kevin L. Ferguson, MD, FCAP**

**Western Diagnostic Services Laboratory**

"We have entrusted the maintenance and support of our primary business application to the folks at Gestalt for over 4 years. We have additionally used them to develop custom applications, to replace those from our LIS vendor, and to manage the connectivity to our clients' EMR systems. They have been a partner in every sense of the word and have become a critical part of our IT team. They have been incredibly responsive and have provided us with valuable insight, advice, and knowledge, beyond our technology needs, to include lab operations expertise. I can't recommend their services strongly enough, they are invaluable to us."

**David Jenkins, CIO**

**Bako Diagnostics**
