

## ABOUT GESTALT

TRANSFORMING ANATOMIC PATHOLOGY

**Gestalt is committed to bringing anatomic pathology into the digital age.**

We provide the enterprise solutions, and services, to transform anatomic pathology laboratories from glass slides, microscopes and couriers to an automated, electronic digital workflow.

### Quality

All of our initiatives are founded in quality. Quality in the solutions we develop as well as in the services we provide. We follow an agile development process in our product development to provide rapid, high quality innovation. We focus on quality in the technology - so you can focus on quality in healthcare.

### Passion

Gestalt's employees are passionate about delivering solutions that exceed market demand. We are driven to deliver next generation functionality - today. Our belief is that if we provide the richest technical functionality you will be able to rapidly increase diagnosis times, training, validation, information sharing, remote consultations, tumor board prep and access to available specialty resources regardless of their location.

### Dedication

Our employees are not only smart and experts in their respective fields, they are also dedicated to increasing the means for research and innovation in healthcare. We are all in business to be successful, but at Gestalt, we are also focused on providing a platform for faster, less expensive, and more accurate diagnoses, treatment and patient outcomes.

### Advanced Technology

Our solutions are all based on the latest technology standards - HL7, DICOM, etc. - with a focus on security. But what really sets us apart is our unique Pathologist Cockpit. Now the pathologist has access to all relevant case information as well as digital images but in a streamlined workflow - eliminating the need to be mired in the LIS.

### Artificial Intelligence & Image Analysis

Gestalt's philosophy for our customers is to allow them to choose the algorithms and computational services that are best suited to their test menus and needs. We will integrate or interface with those to provide an automated, streamlined experience for the Pathologist in their workflow. We currently work with vendors for breast, PD-L1 and dermatopathology.

## Proven Digital Expertise

Our PathFlow™ solution is built upon the foundation of a widely adopted radiology workflow engine which is being used for over 13 million reads per year. We have significant, proven success in building, deploying, and supporting that platform. We have now taken the basis of that proven technology and reworked it for the pathology lab. More specifically, for pathologists.

## Our History

Gestalt Diagnostics, LLC was formed as a joint-venture in 2015 that included Nuvodia, LLC (a subsidiary of Inland Imaging Investments, Inc.). Nuvodia provides PACS hosting and healthcare technology services to physicians, hospitals, clinics and laboratories across the United States and manages millions of medical imaging exams annually.

Gestalt Diagnostics has developed PathFlow, a software platform specifically designed to bring the benefits of digital workflow to pathologists and pathology laboratories. This product was originally developed, by what is now Gestalt's team, to support Inland Imaging's radiology practice as they evolved to a fully digital reading platform. Medicalis [Siemens Healthcare] acquired the rights to the intellectual property and has continued to expand the features and customer base nationally. Today it is used in leading hospitals across the United States and supports more than 15 million studies annually.

## Solutions For:

- Remote Pathologist Access
- Primary\* and Secondary Diagnosis
- Consults
- Tumor Board
- Peer Review & QC
- Validation
- Seamless Support for TC/PC
- Multi-Disciplinary Review
- Top Ranked IT Services and Support
- Interfacing and Integration Services
- IT Staff Augmentation
- Project Management Services
- Legacy LIS Support and Consulting
- Workflow Optimization Consulting

## Why Gestalt

- Pathologist Cockpit
- Universal Viewer
- Integrate with any LIS
- SAAS Delivery Model
- Case Annotation and Navigation
- Patient History and Prior Image Review
- View Multiple Images Simultaneously
- Short and Long Term Digital Storage
